- Quickly spot trends and exceptions with forward-looking analysis
- Relieve the burden on IT and empower business users
- Cater to a variety of reporting needs, from expert to novice
- Forgo making decisions based on incomplete information
- Gain confidence in the accuracy of your data

Oracle Essbase Explained

Oracle Essbase is the industry-leading, multi-dimensional online analytical processing (OLAP) server, providing a rich platform for developing custom analytic and enterprise performance management applications. By leveraging its self-managed, rapid application development capabilities, business users can quickly model complex business scenarios. For example, swiftly develop and manage analytic applications that can forecast likely business performance levels and deliver "what-if" analyses for varying conditions. Oracle Essbase supports extremely fast query response times for vast numbers of users, large data sets and complex business models.
